Benefits of an Acid Neutralizer

Acid Neutralizers are used to balance out specific water problems. If your water is acidic, it can be extremely corrosive to your plumbing system. Signs of a low pH are blue green stains on toilets, fixtures and tubs, which means your water is eating away at your pipes. If left untreated this will lead to problems with leaking pipes and costly repair bills. An acid neutralizing filter can treat this issue and prevent any further damage.

Diamond H2O Design

- Residential Point of Entry (POE) acid neutralizer
- Single-tank system with custom media blend to raise the pH of acidic water and prevent overcorrection
- Manufactured to neutralize acidic water efficiently in high and low flow conditions
- Automatic or manual backwash features prevent plugging that will constrict flow
- Specialized fillport for efficient media replacement without the need to remove the control valve
- Certified to remove ferric iron and other particles

The Diamond Difference

Your investment in Diamond H2O water treatment equipment will provide you with not only solid, high quality products but also a company that takes pride in providing expert, unmatched service. For over 80 years the Diamond H2O family has been providing enhanced water solutions to it's customers, and will continue to be on the cutting edge of developing technologies while upholding a strong, committed family-oriented moral. We welcome you, and we are here to help.

Diamond H2O is a long standing member of these fine organizations:
