

DO YOU KNOW WHAT'S IN YOUR WATER?

Do you know what's in your drinking water? Learn more about where your water comes from and what could be in it.

According to the EPA (Environmental Protection Agency), there are

150,819
water systems*

in the United States.

***Only 3%** of these systems have reported health-based violations.

The city is responsible for cleaning water. **Before the water gets to you, it goes through a disinfection process using chlorination.** Chlorination kills off bacteria and parasites; however, some germs can still get through.

- Coliform Bacteria/E. Coli
- Alkalinity
- Arsenic III & IV
