## Know Your Water

Connected Water Treatment Equipment

### DLSM : Side Mount Filter

- Has a quiet air release that won't startle anyone during regeneration
- Eliminates metallic taste in drinking water
- Improves efficiency by reducing salt usage in your water softener
- Prevents iron build up in the valve; saving you from costly service calls

### DLAF : Aeration Filter

- Oxidizes and removes iron, while reducing manganese and sulfur odors
- Reduces inorganics found in water supplies
- Lowers the amount of maintenance due to self-cleaning backwash cycles
- Saves homeowners 1000's of gallons of water annually
- Removes large volumes of iron, avoiding staining on household surfaces

### DLS : Water Softener

- Improves the quality and effectiveness of laundry detergent during wash
- Protects against white scale build-up on household appliances & surfaces
- Increases household appliance efficiency by preventing scale deposits from forming
- Keeps hair and skin feeling soft and hydrated due to removal of water hardness

### DLF : Filter System

- Lowers the amount of maintenance due to self-cleaning backwash cycles
- Allows for flexibility: applicable in either chlorine removal or raising pH level applications
- Reduces inorganics found in private wells
- Has the ability to add solenoids or injection devices on valve outputs for added functionality
